Spartan Angling

(From Page 31)

viously and others, like two of the kids in his current class, having access to both fishing boats and the trucks needed to haul and launch them.

On this day, half of the kids ended up in those two boats, while the rest fished with Adam on his family's pontoon. Those two students with boats trailed the boats to the lake, while the rest of the party was given a lift, along with all of their gear, on a school bus. Plans were to pick them up after fishing at around 2:30 p.m.

It was a full school day's worth of fishing, complete with a lunch and hanging out at Adam's cabin property with a fire pit going to roast bratwursts and marshmallows before they all headed back out for more fishing.

Jesse Adams, whose previous fishing experience was limited, wound up catching a pair of northern pike.

"It's my first fish," he said of the first of those pike. But further prodding revealed it was his first game fish – he'd previously caught a bluegill.

"Well, it's the first fish worth talking about," Adams clarified after releasing the fish.

Adam allowed each student to decide on whether or not they would keep their fish, and most fish were put back in the lake. Just a few were kept.

"Jesse, you could have mounted it to your wall," said Jacob Niemi, who hoped to take home any fish he caught to his parents for a meal.

All of the kids ended up catching at least one fish.

Senior Alex Karanen, whose family has property on the lake and who trailed one of the two boats to the lake, caught a pair of dandies – a thick, 28-inch pike, which he planned to keep, and a chunky largemouth bass of about 3½ pounds, which he released after showing it to his classmates.

The fishing on the pontoon started out a little slowly; it took about two hours before Adams caught the first of his two northerns.

"Somebody has to break the ice here," said Adam, allowing the kids to do some casting, then some trolling throughout

the day. In the afternoon, one of the kids suggested they pull up to a spot for some bluegill fishing with bobbers and worms, but Adam's bluegill spot, a shallow bay, ended up producing only one of the panfish.

Adam intended to keep the "keeper" fish cold until the following day, when he planned to fillet them during the fishing class.

"Throw and grow, or hook and cook," he joked, when kids were confronted with deciding what to do with their fish. "You get to pick, but you can't be against eating fish because they taste so darned good."

Throughout the day, he

reminded the students how good they had it.

"You could be in third hour right now," he told them earlier in the day, reminding them later of what hour they'd be in on a few other occasions after checking the time.

The kids had an idea how lucky they were that Adam had taken the initiative to launch the class, especially

when it was about time to pack up and go.

"Where are we going?" Niemi asked.

"Back to reality," Adam said.

"Can we come back tomorrow?" Niemi asked.

The answer was no, but luckily for the Spartan Angling students, that reality includes two more field trips.

Gear & Gadgets

HIGH VOLTAGE BY JEBS CHOKES
From the leading choke tube company in the nation, JEBS High Voltage Chokes are taking the waterfowl community by storm.

Designed to easily and effectively handle steel, lead, bismuth or any other shot.

The patented design gives the shooter more of a consistent pattern and incredible knockdown power for those longer shots.

Offered in ported and non-porting models in either black nitrate or original dull.

JEBS High Voltage Waterfowl Chokes available in:

- .410
- 28 Gauge
- 20 Gauge
- 12 Gauge
- 10 Gauge

Since 2011, JEBS Chokes have manufactured the highest quality: Sporting Clay, Turkey, Upland, and Waterfowl choke tubes available on the market to date. Made 100% in the U.S.A. & boasting a revolutionary interior-bore design, these patented choke tubes produce distinctly tighter patterns as well as providing one of the most advanced recoil-reduction systems known to man.

MUDDY OUTDOORS INFINITY SERIES GROUND BLINDS OFFER INFINITE USER-CUSTOMIZATION

Muddy Outdoors all-new Infinity ground blinds set new benchmarks for concealment, and customization.

In designing the Infinity 2-Man and Infinity 3-Man blinds, the Muddy engineers considered the key needs of bowhunters — specifically, the need to configure the window opening to meet changing hunting conditions. To meet these objectives, new Shadow Mesh™ window curtains were first selected to provide true one-way viewing and to eliminate the need for conventional primary window panels. The Infinity 2 features a silent-slide window adjustment system to provide hunters the ability to independently raise or lower the dual Shadow Mesh windows for top or bottom viewing, depending on the hunter's needs. Also, a specialized memory wire was incorporated into the Shadow Mesh windows (available only on 2-Man model). This is a unique feature that allows the hunter to customize the window to best match the hunting scenario and shooting style (crossbow, rifle, shotgun or vertical bow). The Infinity 3 features three independent silent drop down windows. The Infinity series have an ultra-dark interior to assist in staying undetected.

Optimal concealment also comes via the Infinity's Veil Camo pattern. For "scent concealment," the Infinity blinds include pockets for ozone-generating devices.

Muddy is a subsidiary brand under GSM Outdoors. For more information please visit www.gsmoutdoors.com.

ARCTIC SHIELD HEAT ECHO SELECT WADERS
The ArcticShield Heat Echo Select Waders feature patent pending Retain Active material strategically placed throughout the wader upper. Retain Active provides 20 percent more warmth, and reduces the overall weight of the wader.

ArcticShield Retain™ Active, is a patent-pending technology, which efficiently retains body heat by providing thermal insulation, but also allows the product to be breathable and extremely thin, providing not only comfort, but agility to move freely.

The Heat Echo Select Chest wader has X-style suspenders with reverse buckles, which can also be used as a belt, to cinch the wader. The Chest Wader features a draw cord adjustment, two-way zippered chest pocket with a pass-behind hand warmer pocket, heavy-duty web belt, double-layered, reinforced knee and seat area, articulated knees, and neoprene boot gaiters.

The Heat Echo Select Chest Waders are available in regular and stout sizes, and in a stocking foot waist wader option is also available.

ArcticShield® is one of several brands manufactured by Absolute Outdoor, Inc. For more information about this and all our other products from ArcticShield, visit www.arcticshieldoutdoor.com.

COYOTE CYCLONE FLASHER ATTRACTS FISH AT MULTIPLE SPEEDS

Luhr-Jensen's new easy-pulling, fully rotating Coyote Cyclone Flasher features an innovative Kick-Fin design that enables it to call in big salmon and lake trout at several trolling speeds.

The patent-pending Coyote Cyclone Flasher rotates in a wide, elliptical pattern, adding fish-attracting flash and motion to your trolling presentation. Its namesake cyclone blade rotates independently in the flasher's center, adding a strobing flash and vibration.

Luhr-Jensen consulted numerous Great Lakes captains in different ports for almost three years while designing and engineering the Coyote Cyclone Flasher.

The Coyote Cyclone Flasher is available in two sizes – 8-½ inches and 11 inches. In the early half of this summer, the smaller model has helped Great Lakes anglers attract salmon and lake trout to Luhr-Jensen Flash Flies. Later in the summer, after the water has warmed considerably, those anglers will catch bigger fish by pulling Luhr-Jensen Twinkie Rigs behind the 11-inch Coyote Cyclone Flasher.

All the moving parts on a Coyote Cyclone Flasher are fitted with heavy-duty ball-bearing swivels and welded rings to ensure many years of fish-attracting action.

Luhr-Jensen is a Rapala Respected Brand. For more information visit www.Rapala.com.

2019 GLACIER 817TH FISH HOUSE

At Glacier our goal is to build only the highest quality ice fishing houses, constructed of premium materials that provide lasting value and years of trouble-free service. From our full line of Standard Features to our Premium Fit and Finish, you'll see for yourself how our attention to detail and never-ending commitment to product improvement sets a Glacier Ice House apart from the competition and makes a Glacier Ice House... "The Ultimate Way To Play For All Seasons!"

The Glacier 817TH features an exterior length of 17 feet and 96 inches of width. Its three-bunk system sleeps five people comfortably and with six holes, there's plenty of room for everyone to fish. This single axle unit sports a 1,084-pound cargo capacity, comes with two, 30-pound propane tanks, and a 30,000 BTU forced air furnace.

Like all Glacier Ice Houses, the 817TH is constructed with the strongest and most reliable trussed roofing system on the market today. All Glacier Ice Houses feature weather sealed, seamless-rubber, trussed roof constructed of 3/8 inch plywood, all cedar interiors, LED lighting, strong axle design, and J-channel trim.

At Glacier we offer custom exterior colors to fit every taste. From our luxurious metallic finishes to our bright eye-popping colors that turn heads, we offer colors to fit every taste. Using premium quality Aluminum, our paint resists UV degradation, which prevents chalking and fading in harsh environments.

Make sure to check out the 817TH and the entire line up of Glacier Ice Houses – RV Explorer's, Toy Haulers, and Shells. Visit www.glaciericehouse.com for dealers.
